Ride-Hailing Conceptual ER Diagram

Rectangles = entities · ovals = attributes · diamonds = relationships · underlined = key attribute · (min,max) = participation

Each (min,max) pair is next to the entity whose participation it describes (Lecture 02, slides 26–29).

Double borders identify the weak trip_detail and its identifying HAS_DETAIL relationship (Lecture 02, slides 14–15).

trip_detail inherits its identifier from Trip.trip_id; SQL stores it as one shared PK/FK column, not a composite key.

The generator creates one detail row for every Trip; the DDL alone permits a Trip to have no detail row.
